

## Forklift Grapple

Grapples for Forklifts - Grapples work together with the crowning operation of the bucket cylinder positioned on the excavator. They could mount directly onto the jib or whichever quick hitch which is in bucket position. Grapples are normally utilized for the handling and processing of construction materials, timber, domestic and aggregate waste items. The grapple's boxed design has additional support bridging. This manufactured design provides the grapple with utmost support and strength by way of preventing the body from breaking and twisting through its operation.

The grapple together with all of its moving parts are constructed of hardened steel. The pivot points are designed to be able to ensure supreme closing force and holding ability. The operator has the capacity to deal with all sizes and varieties of materials because of the jaws fitted at the end of the grapple with toes. This could enable the jaws to be able to close through one another in a finger configuration for maximum handling capacity.
